Future Work

The background of the slide features a detailed, semi-transparent illustration of several COVID-19 virus particles. These particles are spherical with a textured, greyish surface and are covered with numerous red, crown-like spikes (resembling the Greek letter alpha) and smaller yellow circular spots. The particles are scattered across the slide, with one large, prominent particle in the center-right and several others in the foreground and background, creating a sense of depth.

- Improve precision

 - More features
- Geography
 - State/local level
- Application

The background of the slide features a 3D rendering of several COVID-19 virus particles. These particles are depicted as spherical, grey, textured structures with numerous red, crown-like spikes protruding from their surfaces. Some yellow, hexagonal shapes are also visible on the surface of the particles. The particles are scattered across the frame, with some in sharp focus and others blurred in the background, creating a sense of depth.

Questions?

Thank you!

Appendix

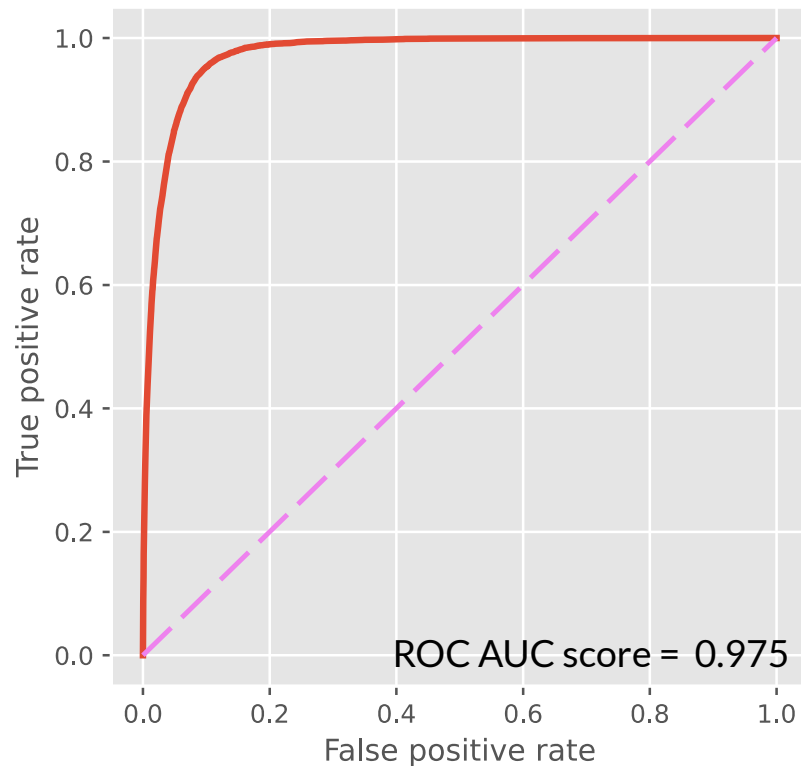

Metric	Test	Train
<i>Accuracy</i>	0.910	0.910
<i>Recall</i>	0.939	0.946
<i>Precision</i>	0.416	0.419
<i>F1</i>	0.580	0.576
<i>F-beta (beta=2)</i>	0.756	0.756
